Professional Summary

Android developer focused on building scalable and testable apps using Kotlin and Jetpack Compose. Strong in MVVM and multi-module architecture with clean code practices, CI/CD automation, and quality-first development.

Core Skills

- Kotlin, Coroutines, Flow
- Jetpack Compose, Material 3
- MVVM, Clean Architecture, SOLID principles
- Multi-module Android project structure
- Retrofit, REST APIs, Repository pattern
- Unit Testing (JUnit, MockK), 100% test coverage mindset
- GitHub Actions CI/CD, code quality automation

Experience

Android Developer

Freelance / Personal Projects | 2023 - Present

- Designed and implemented Android applications using Kotlin and Jetpack Compose.
- Applied MVVM and modular architecture to improve maintainability and scalability.
- Built reusable UI components and domain-driven feature modules.
- Integrated API layers with robust state handling and error management.
- Maintained high-quality test suites and coverage-focused CI workflows.

Key Projects

Learning Flutter App (Architecture & Testing Showcase)

GitHub: <https://github.com/bhanwarsuthar/Learning>

- Implemented structured app layers (data, repository, view model, UI).
- Added automated README/project statistics updates using GitHub Actions.
- Configured automated coverage reporting and dashboard publishing.
- Demonstrated strong testing discipline with measurable coverage.

Education

Bachelor of Technology (Computer Science)

University Name | Graduation Year

Certifications

- Android Development with Kotlin (Add exact provider and year)
- Jetpack Compose (Add exact provider and year)

Achievements

- Built and maintained CI/CD workflows to automate quality checks and documentation updates.
- Consistently shipped maintainable code with architecture-first approach.

Additional Information

- Languages: English, Hindi
- Availability: Open to Android Developer opportunities
- Work Preference: Full-time / Contract / Remote
